

# Rise Hire PRD - Cover & Executive Summary

AI Recruitment Assistant for IDS Sujet 3

## Mission

**Automate CV extraction and ranking so RH teams can shortlist faster, with transparent scores and evidence-based comparisons.**

## Executive Summary

- Manual triage is slow and inconsistent.
- Rise Hire standardizes evaluation through weighted scoring.
- Backend and API contract are completed.
- Frontend integration and presentation polish are the final phase.

# Problem, Opportunity, and Scope

## Current Problems

- High CV volume with low signal quality
- Subjective and non-repeatable screening
- Delays between offer creation and shortlist
- Limited visibility on why candidates are rejected

## Opportunity

- Unified process from JD to ranked list
- Explainable fit score and threshold colors
- Faster recruiter decisions
- Better consistency across hiring cycles

## Scope Definition

In scope: auth, offers, CV ingestion, extraction, scoring sessions, ranking, CSV export.  
Out of scope: interview scheduling, HRIS/payroll integration, full ATS replacement.  
Constraint: first release targets robust screening workflow and frontend integration readiness.

# Personas and End-to-End User Journey

|                                                                                                                                                 |                                                                                                                                             |                                                                                                                                                        |

User Journey (Recruiter)

1) Login → 2) Create/extract offer → 3) Upload CVs  
4) Create session with weights → 5) Start async scoring  
6) Poll status until completed → 7) Review ranked list  
8) Export CSV and validate shortlist with hiring manager

- Decision gates
- Validation errors (payload/auth)
  - Low extraction confidence flagged for manual review
  - Missing critical skills trigger score penalties

**Outcome: a traceable, repeatable hiring decision pipeline.**

# Feature Matrix and Scoring Logic

## Feature Matrix (Value vs Ownership)

- Auth & user session management | Owner: backend
- Job offer creation + AI extraction | Owner: backend + product
- CV upload, dedup, extraction confidence | Owner: backend + NLP
- Session orchestration and async scoring | Owner: backend
- Ranked results + thresholds + CSV export | Owner: backend + frontend

## Scoring Logic Summary

Weighted criteria baseline: skills, experience, education, language, location.  
Critical-skill penalty rule reduces final score when mandatory competencies are missing.  
Score outputs:

- final\_score (0.0-1.0)
- final\_score\_pct (0-100)
- threshold: green/orange/red

The methodology follows project scoring design guidance and sprint validation loops.

**Formula transparency is mandatory for recruiter trust.**

# Technical Foundations and Key Risks

## Technical Foundations

- FastAPI backend with JWT auth
- Session-based async scoring orchestration
- Structured API contract for frontend integration
- Persistent storage and export pathways
- Input validation and predictable HTTP semantics

## Risk Register

- R1: CVs with no extractable text → mitigation: flag + manual review path
- R2: Invalid weights or malformed payloads → mitigation: strict validation
- R3: Scoring conflicts while already running → mitigation: 409 handling + polling UI
- R4: Frontend integration drift → mitigation: docs/API.md as contract source
- R5: Prompt brittleness → mitigation: limit testing and iterative tuning

**Release gate: all critical risks have explicit handling paths.**

# KPIs, Roadmap, and Final Handoff

## KPI Framework

- Time-to-shortlist reduction
- Extraction confidence distribution
- Session completion success rate
- Recruiter confidence in ranking quality
- Number of manual corrections per campaign

## Roadmap

- Phase A: frontend integration completion
- Phase B: UI feedback loop and ranking UX refinements
- Phase C: deployment hardening and handoff package
- Phase D: post-demo optimization and optional feature expansion

## Handoff Readiness Checklist

- Backend stable and documented
- API integration guide delivered
- Sprint evidence consolidated
- Architecture workflow visualized
- Final PDFs approved for presentation
